ABOUT BRIAN

Brian W. Benn is the Director of the IT Business Solutions Team at the Atlanta Housing Authority. His responsibilities include, but are not limited to, ensuring the successful development/enhancement, testing, and deployment of items on the Consolidated Progress Report (CPR) card within a Scrum/Agile framework. This is in addition to the several other operational and day to day responsibilities.

Brian possesses full software development lifecycle (SDLC) experience and is proficient at every level of the software engineering paradigm. He has played an integral role on several NASA and Department of Defense projects and initiatives. Brian has led IT teams of up to 75 people including as many as 25 offshore resources on one engagement. Brian has managed all aspects of IT inclusive of budgetary responsibility, while consistently providing firm leadership.

Brian is the former Vice President of Technology at G4 Enterprises where he defined IT operations, standards, processes, and procedures. While at G4 Enterprises, Brian successfully spearheaded the development, testing, and implementation of F.O.G. Mobile, a proprietary Java Web start-based Swing application for the DeKalb County Water and Sewer Department in DeKalb County, Georgia. This application allows the F.O.G. inspectors to remotely record inspections offsite, automates the existing process, and increases productivity by over 1000%.

Brian studied Computer Science and Mathematics at the University of Alabama in Huntsville and completed a Master of Business Administration degree at Belhaven University. Brian serves on the board of directors of the Technology Association of Georgia's Southeastern Software Association. Brian strives to be a servant leader - mentoring individuals, promoting development/growth, and empowering them to maximize their potential, individually and collectively.
